		transformed cells, proteins and antibodies, f	New DNA encoding chromatin regulator protein with SET domain - and		N-PSDB; AAT43624.	WPI; 1996-518672/51.		Jenuwein T, Laible G;		(BOEH) BOEHRINGER INGELHEIM INT GMBH.		10-MAY-1995; 95DB-01016776.		02-MAY-1996; 96WO-EP001818.		14-NOV-1996.		WO9635784-A2.		Homo sapiens.		cancer.	Chromating; regulator; EZH1; EZH2; SUV39H; SET domain; gene therapy,		Chromatin regulator protein EZH2.		05-MAY-1997 (first entry)	25-MAR-2003 (revised)		AAW05260;		AAW05260 standard; protein; 746 AA.	

Claim 12; Fig 7; 38pp; German.

Sequence 746 AA;

The DNA was isolated by screening a human B cell cDNA library with mixed Drosophila DNA probes based on the conserved SET domains in E(z) and Su(var)3-9. The DNA, and its products, are useful in therapy (esp. gene therapy) and diagnosis of human diseases that involve deregulated chromatin-regulator genes having a SET domain, esp. cancer. (Updated on 25-MAR-2003 to correct PR field.)

The invention relates to a method for detecting a lung cancer-associated cranscript in a cell from a patient, comprising contacting a biological cample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits can associated polynucleotides and polypeptides are used for identifying a sesciated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for compound that modulates a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by cancer in a patient and for treating a mammal having lung cancer by cancer in a patient and for treating a mammal having lung cancer by cancer in a patient and for treating a mammal having lung cancer by cancer in a patient and for treating a member of the sensitivity general cell lung cancer, such as small cell lung cancer, non-small cell confinement, interstitial pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, asthma and bronchies that modulate lung cancer, such as antibodies. Sequences and suggested by the second compounds that modulate lung cancer, such as antibodies. Sequences and suggested polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                18-APR-2001;

Claim 1; OBS ㅂ g 2080pp;

proteins; drug compositions comprising a modulator of STAT6-activating protein activity or expression; and methods of treating patients by administration of the drug compositions. The STAT6-activating proteins, nucleic acids encoding them, and modulators of their activity or expression are useful in the diagnosis and treatment of allergic diseases, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, cancer, infections (e.g., HIV), cancer and disorders associated with Thi hyperfunction. The present sequence is related to the invention. homology to the STAT6-activating proteins and their encoding nucleic acids. The invention also relates to recombinant vectors and host cells comprising a STAT6-activating protein-encoding nucleic acid; the recombinant production of a STAT6-activating protein; an antibody specific for a STAT6-activating protein; antisense oligonucleotides and ribozymes targeted to nucleic acids encoding a STAT6-activating protein; methods of screening for activators or inhibitors of STAT6-activating relates to (ADG10411-ADG10894) and to sequences 242 human STAT6-activating proteins and cDI CDNAS

The invention relates to nucleic acids and proteins (ADN38683-ADN40064 whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to method of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; differential expression; cancer; angiogenic disorder; fibrotic disorder; psoriasis; ischaemia; heart disease; atheroscleros inflammatory disease; autoimmune disease; autoimmune disease; retinal neovascularistaion syndrome; scarring; uterine fibroid; detection; diagnosis; prognosis; drug screening; drug targeting; detection; contraception; cytostatic; cardiant; immunomodulatory; wound healing; contraception; cytostatic; cardiant; immunomodulatory;
                                                                                                                                         Determining the presence or absence of a pathological useful for diagnosing, prognosing or treating cancer, a nucleic acid in a biological sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a mucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the polypeptides and mucleic acids. The nucleic acids, polypeptides, antibodies and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistation syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                           CC The invention relates to an agent for the prophylaxis and therapy of CC cancer comprising a compound which inhibits the activity or expression of CM thuman EZH2 (enhancer of zeste homologue 2), resulting in apoptosis. The CC human EZH2 (enhancer of zeste homologue 2), resulting in apoptosis. The CC EZH2 inhibitors include anti-EZH2 antibodies and EZH2 antisense nucleic condist. The invention also relates to a kit for screening for inhibitors CC in EZH2 in transferase activity which methylates histone H3 on lysine considers at position 9 and/or 27. It has been found to be deregulated in CC various tumours, and acts as a mediator of tumorisenesis, being able to reverse repression of cyclin A which in turn mediates cell cycle advancement. The agent of the invention can be used for preventing, creating and diagnosing cancers such as colorectal cancer, breast cancer, cling cancer, pancreatic cancer and ovarian cancer, and can also be used in drug screening. The agent of the invention is safe and less toxic than prior art cancer prophylactic/therapeutic agents. The present sequence corporesents human EZH2, which is referred to in the claims.
                                                                                                                                                                                                                                                                                                  Query Match

CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide of the polynucleotide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide core peptide of the polynucleotide by contacting the polypeptide or peptide or peptide of the polynucleotide by contacting the polypeptide or peptide core peptide of the polynucleotide by contacting the polypeptide or peptide core peptide of the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide core is useful as a primer for synthesising the polynucleotide, or as a probe core detecting the polynucleotide. The polynucleotide core may be included in them, for developing a diagnostic marker or core medicines for regulation of their expression and activity, or as targets of gene may be included in them, for developing a diagnostic marker or core for the trapy. The genes are involved in tissue and/or cell core reguneration. Membrane proteins, signal transduction-related proteins, curvological diseases, cancer, tumours for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. STAT6-activating proteins and and developing drugs to treat autoimmune diseases, diabetes, encoded genes, applicable in diagnosis allergic diseases, inflammations, hyperlipidemia, infections e.g. HIV, a œ.

۲, SEQ ID NO 354; 2080pp; Japanese

The invention relates to 242 human STAT6-activating proteins and cDNAs encoding them (ADG10411-ADG10894) and to sequences with 95% or more homology to the STAT6-activating proteins and their encoding nucleic acids. The invention also relates to recombinant vectors and host cells comprising a STAT6-activating protein-encoding nucleic acid; the recombinant production of a STAT6-activating protein; an antibody specific for a STAT6-activating protein; antisense oligonucleotides and ribozymes targeted to nucleic acids encoding a STAT6-activating protein; entire oligonucleotides and ribozymes targeted to nucleic acids encoding a STAT6-activating protein; entired to stargeted to nucleic acids encoding a STAT6-activating protein;

cc whether a mammal will respond or is responding to an anti-cancer agent contact modulates cyclin-dependent kinase (cdk) activity. The method cc comprises measuring the level of one or more biomarkers selected from cc 2774 biomarkers given in the specification (nucleotide sequence SEQ ID CN 0:1246 (Genbank EST W28729) is especially preferred). The method of the cinvention is utilized in a kit for determining or predicting whether cc invention is utilized in a kit for determining or predicting whether cc patient would be susceptible or resistant to treatment by an agent condulating cdk activity. The invention also describes a method for cc utilizing individualized genetic profiles for treating diseases and cc disorders based on patient's response and molecular level, specialized cc microarrays comprising the biomarkers described, antibodies directed cc against the biomarkers and a cell culture model to identify biomarkers. CC The cdk modulator is preferably N-5-([5-(1,1-Dimethylethyl)-2-CC oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-CC tartaric acid salt. Note: The sequence data for this patent did not form control of the printed specification, but was obtained in electronic format control of the printed specification, but was obtained in electronic format control of the invention a biomarker used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                  CY The invention relates to an isolated NOVX polypeptide selected from NOV1-
CC NOV27 polypeptides, a mature form of NOVX, a variant of NOVX or a
CC fragment of NoVX. Also included are determining the presence or amount of
CC to the polypeptide), determining the presence of or predisposition to
CC the polypeptide), determining the presence of or predisposition to
CC the polypeptide), determining the presence of or predisposition to
CC to the polypeptide, a potential thereof levels of NOVX in a first mammalian
CC subject, identifying a potential therapeutic agent for use in the
CC reatment of pathology related to aberrant expression of physiological
CC interactions of NOVX, screening for a modulator of activity or of latency
CC or predisposition to a pathology associated with NOVX, the nucleic acid
CC encoding NOVX, vectors and host cells. NOVX is useful for identifying an
CC agent (a cellular receptor or downstream effector) that binds to NOVX.
CC associated disorders in humans, and in the manufacture of a medicament
CC for treating a NOVX related disease human disease e.g.
CC adrenoleukodystrophy, congenital adrenal hyperplasia, haemophilia,
CC hypercoagulation, idiopathic thrombocytopaenic purpura, autoimmune
CC disease, allergies, immunodeficiencies, transplantation, Von Hippel-
CC parkinson's disease, Huntington's disease, stroke, tuburous sclerosis,
CC parkinson's disease, huntington's disease, systemic lupus
CC parkinson's disease, stroke, tuburous sclerosis,
CC parkinson's disease, stroke

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL0161-6-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates a recombinant DNA construct comprising a CC polynucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-1108). The CDNAs and proteins are from corn, soybean, CC harbidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a complex property in the property of promoter region comprising transforming a plant with a recombinant DNA construct comprising a promoter region complex property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant tolerance, for providing increased comproving plant tolerance for comproving plant tolerance, for improving plant tolerance, for improving plant tolerance to plant disease, for galactomannan production, for production of plant growth regulators, for improving plant tolerance, for improving plant tolerance to harbicides, for increasing the rate of complex providing plant tolerance to harbicides, for increasing the rate of photosynthesis, for modifying seed or pests, for lignin production, for improving plant tolerance to pathogens or pests, for lignin production, for improving plant tolerance to pathogens or pests, for yield improvement by modification of compositions of co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Plant; transgenic; cold tolerance; growth rate; drought tolerance; disease resistance; galactomannan production; plant growth regulator; heat tolerance; herbicide tolerance; lignin production; extreme osmotic condition tolerance; pathogens resistance; pest resistance; yield improvement; seed oil yield; seed protein yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improbiological characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       13-JAN-2005 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADT57579;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADT57579 standard; protein; 895 AA

CC tolerance to extreme osmotic and drought conditions, and improving I CC tolerance to plant pests or pathogens. They can also be used in phys CC arrays of molecules, plant breeding markers, computer-based storage CC analysis systems. The present sequence is one of the 5544 plant prot CC sequences of the invention. Note: The sequence data for this patent CC not form part of the printed specification, but was obtained in CC electronic format directly from USPTO at CC seqdata.uspto.gov/sequence.html?DocID=20040216190.                                                                                                                                                                                      ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant DNA construct, useful for improving plant tolerance cold, heat, drought, herbicides, extreme osmotic conditions, pathogopests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a recombinant DNA construct comprising polynucleotide consisting of a sequence encoding an amino acid available in electronic form from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 72833; 15pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cold, heat, drought, herbicides, extreme osmor pests, for conferring increased resistance to

                                                                                                                                                                 The invention relates to plant genetic engineering. More specifically, CC the invention relates to isolated and purified polycomb group (PcG) genes CC from Zea mays (maize), termed Mezl and Mezl (Maize E(z)-like 1 and 2) CC genes comprising a sequence of 3180 and 3030 bp respectively, defined in CC the specification, or its conservatively modified and polymorphic CC variants. The PcG genes of the invention are useful in constructing CC recombinant expression cassettes which can be introduced into a desired plant, to produce a transgenic plant. Promoters derived from the Mezl or CC Mezl genes are useful to direct expression of heterologous sequences. The CC modified variants of the PcG genes are useful for generating or selecting CC methods for crop improvement. Mezl and Mezl proteins can be used to CC repress the expression or prevent the expression of a desired target gene CC expression in plants to create novel plants having improved agronomic CC immunogen for producing monoclonal or polyclonal antibodies which are CC immunogen for producing monoclonal or polyclonal antibodies which are CC polypeptide, and for affinity chromatography for isolating a Mezl or Mezl

                                                                                                                                                           밁
                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                              The present invention relates to polynucleotide sequences, and the CC proteins they encode. The sequences are isolated from a variety of CC proteins they encode. The sequences are isolated from a variety of CC polynucleotide and plants (e.g. maize, rice, sorghum, thale cress, CC soybean, and wheat), cyanobacteria, bacteria, yeast and other fungi. The CC polynucleotide and polypeptide sequences of the invention are useful in the production of transgenic plants that have improved properties. Also CC disclosed are methods of producing fertile transgenic plants, preferably maize, with desired phenotypes. The polynucleotide and polypeptide sequences are useful for improving plants by providing protection against cosmotic stress, improving altering sugar transport and/or metabolism, CC sequences are useful for improving plants by providing plant (creation) the cell cycle pathway, reducing plant height, modifying carbohydrate transport, improving disease resistance, improving captomativity, improving insect resistance, improving disease resistance, improving continued in the continued of the continued

The invention relates a recombinant DNA construct comprising a polynucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The CDNAs and proteins are from corn, soybean, CC Arabidopsis, wheat and rape but the specification does not indicate which consequences is derived from which organism. Also included is a method of CC producing a plant having an improved property, comprising transforming a CC plant with a recombinant DNA construct comprising a promoter region CC functional in a plant cell operably joined to a polynucleotide encoding a CC polypeptide associated with the property, and growing the transformed CC plant. The property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle CC pathway, for improving plant drought tolerance, for providing increased CC resistence to plant disease, for galactomannan production, for production of plant secombination in plants, for improving plant heat tolerance, for improving plant tolerance to harbicides, for increasing the rate of CC improving plant tolerance to pathogens or pests, for light production, for improving plant tolerance to pathogens or pests, for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake CC and for yield improvement by providing improved plant growth and compositions of the present invention are useful in the field of biochemistry and content of particular for producing transperic plants with improved content in particular for producing transperic plants with improved content of the present invention are useful in the field of bio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genetics, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen flow, increasing plant tolerance to cold or heat, improving plant tolerance to extreme osmotic and drought conditions, and improving plant tolerance to plant pests or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant protein sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20040216190.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1296
